Important Safety Instructions

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8. Do not install near heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Only use attachments/accessories specified by the manufacturer.
10. Refer all servicing to qualified service personnel.

Warning!

• To reduce the risk of fire or electrical shock, do not expose this equipment to dripping or splashing and ensure that no objects filled with liquids, such as vases, are placed on the equipment.
• Do not install in a confined space.

Service

• All service must be performed by qualified personnel.

Caution:

You are cautioned that any change or modifications not expressly approved in this manual could void your authority to operate this equipment.

When replacing the battery follow the instructions on battery handling in this manual carefully.

EMC/EMI

This equipment has been tested and found to comply with the limits for a Class B Digital device, pursuant to part 15 of the FCC rules.
These limits are designed to provide reasonable protection against harmful interference in residential installations. This equipment generates, uses and can radiate radio frequency energy and – if not installed and used in accordance with the instructions – may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception – which can be determined by turning the equipment off and on –, the user is encouraged to try correcting the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit different from the one to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

For the customers in Canada:
This Class B digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.
(EN) Introduction

Congratulations! You have just bought a chorus pedal that is a stepping stone to a world of inspiration, innovation and tone.

We are proud to present Gravy Tri Chorus and Vibrato, providing TC Electronic’s legendary chorus sounds, intuitive controls, and instant satisfaction. Throw in the lovely feel of the outstanding vibrato with a flexibility that you will simply not find in any other pedal out there and you have Gravy Tri Chorus and Vibrato. We love tone as much as any guitarist out there, and we always aim at pushing the boundaries. We are therefore very excited to present a brand new, groundbreaking concept: TonePrint!

TonePrint gives you instant access to custom-tweaked sounds. We have gathered an impressive list of guitar heroes and had them tailor their signature sounds – the tones that made them famous. TonePrint will not just bring you close to the sounds of your idols, they give you their actual sounds!

Using TonePrints is both easy and fun. Just download the TonePrint you want from www.tcelectronic.com et voilà, your favorite artist has just put a TonePrint in your pedal. Forget emulation – let’s talk collaboration!

www.tcelectronic.com - www.youtube.com/tcelectronic
1 - Effect on/off (true bypass)
2 - 1/4 inch mono jack input
3 - 1/4 inch mono jack input (for stereo in)
4 - 1/4 inch mono jack output
5 - 1/4 inch mono jack output (for stereo out)
6 - FX level control
7 - Speed time control
8 - Chorus/TonePrint/Vibrato selector
9 - Depth control
10 - Tone control
11 - Power in (9VDC)
12 - USB connection for exchanging TonePrint settings and software updates.
Connecting

Input jacks - Use MONO for mono input and both MONO and STEREO if connecting a stereo source. If you run the pedal on battery, we recommend removing the mono input jack to preserve battery power when you don’t play.

Output jacks – Connect to another pedal or directly into an amp or mixer. Use MONO for mono setups and both MONO and STEREO for stereo setups. Notice that it is possible to select between true bypass and buffered bypass mode via a dip switch located under the battery cover.

Power in – Use a 9 VDC power supply with the following symbol:  

USB

Connect to a computer using the supplied USB cable for upload of TonePrint patches. The connector-type is Mini-B.
The Controls

FX LEVEL
Controls the intensity of the chorus. The chorusing effect occurs when a pitch modulated signal – think vibrato – is played adjacent to a clean signal. Therefore the max chorus intensity is achieved at a 50% wet/dry mix. With Gravy, this is achieved by setting the FX level fully clock-wise.

SPEED
The SPEED knob sets the chorus speed – from slow smooth “Hi-Fi” to much more significant “Leslie” types at high speed.

DEPTH
DEPTH sets the range of the modulation. Experiment with both the SPEED and DEPTH controls to get the effect you are looking for.

TONE
By adjusting the tone you can set how warm you chorus should sound. When using high settings on both speed and depth for that “leslie-type” sound you might want to emphasize the lower frequencies over the higher ones. Try turning TONE counter clock wise.

CHORUS/TONEPRINT/VIBRATO SELECTOR
The selector switch allows you to select between the 3 different types of FX.
TRI CHO (Tri-Chorus)
The Tri-Chorus is a variation of the regular Chorus that uses three stereo Choruses with various offsets for both depth, speed, phase, and chorus delay time to produce a unique, very broad and lush Chorus sound. The Gravy has been voiced especially to nail that old-school fat chorus sound.

TonePrint
Consider the knobs and switches on your pedal as a few handles that actually control a large number of parameters. Dedicated staff has defined the controls, - but wouldn’t it just be cool to let the world’s leading guitar players contribute with their own definition of how the controls should work? YES - this is TonePrint.

Once you have selected TonePrint, all controls react exactly as defined by the artist that has provided the TonePrint and changing the TonePrint in your pedal is easy:

• Connect the pedal to your Mac or PC computer using the supplied USB cable and navigate all the available TonePrints at www.tcelectronic.com/TonePrint or
• Download the TonePrint App from Google Play or the App Store and follow the on-screen instructions.

VIBRATO
In this position the Gravy pedal acts as a Vibrato. The signal is pitch modulated but unlike in a chorus the original signal is not played adjacent. Take your sound from subtle pitch modulation to an all-out Leslie-type feel by varying the SPEED knob.
**Bypass modes and Kill Dry on/off**

Unscrew the back-plate and look for the two small dip-switches in the upper left corner. The upper dip-switch (closest to the DC 9V in connection), switches between True Bypass mode (default) and Buffered Bypass mode.

**True Bypass**
- is a hardwire bypass that gives absolutely no coloration of tone when the pedal is bypassed. Using True Bypass on all pedals is a perfect choice in setups with a few pedals and relatively short cables before and after the pedals.

**Buffered Bypass**
- If you use a long cable between your guitar and the first pedal, if you use many pedals on your board and if you use a long cable from your board to the amp, then the best solution
will most likely be to activate the buffer in the first and last pedal in the signal chain. Can you hear the difference between a pedal in True Bypass or Buffered Bypass? Maybe, maybe not, – many factors apply; active/passive pick-ups, single coil/humbucker, cable quality, amp impedance and more. We cannot give a single ultimate answer. Use your ears and find the best solution for your setup!

**Kill-Dry on/off** – With Buffered Bypass activated (upper switch to the right), the lower dip-switch sets Kill-Dry on/off. Kill-Dry removes all direct signal from the pedals output and is the mode to use when the pedal is placed in a parallel effects loop. Kill-Dry is NOT an option in True Bypass mode.

**Changing battery** – Unscrew the thumb-screw on the back of the pedal and detach the back-plate. Unmount the old battery and attach the new battery to the battery clip making sure the polarity is correct. Then remount the back-plate. To save battery life, remove the input jack when you don’t play.

⚠️ Batteries must never be heated, taken apart or thrown into fire or water. Only rechargeable batteries can be recharged. Remove the battery when the pedal is not being used for a longer period of time. Dispose batteries according to local laws and regulations.
(EN) Technical Specifications

Sounds: Chorus and Vibrato plus TonePrint setting for stuffing Gravy with your favorite artist’s tones

Size & Weight: 72 mm x 122 mm x 50 mm - 300 g (excl. battery)

Battery: Dual Supply Rails technology ensures headroom for line level effect loops from a single 9V battery. Battery failure circuit automatically puts Gravy Tri Chorus and Vibrato into true bypass mode if the battery runs out.

Design: Custom ‘hammerhead’ rugged, die-cast aluminum casing built for a life on the road. Unique one-screw battery access for lightning fast battery changes.

Connectors & Inputs/Outputs: Stereo inputs with automatic mono/stereo sensing – feed it any signal. Stereo outputs for that ultra-wide chorus sound. Mini USB connector for uploading custom TonePrints and software updates.

Knobs etc.: Speed, Depth, FX Level and Tone knobs with high-quality, metal-shaft potentiometers. Heavy duty tactile footswitch with true bypass for zero tone coloration.

In the box: USB cable for uploading TonePrints.

These specifications are subject to change without notice.
